# Executive Summary

This document outlines the deployment plan for an AI-powered lead enrichment and scoring pipeline across EliseAI's Sales Development team. The system replaces 45 manual research per lead with a fully automated enrichment run improving both coverage and outreach quality.

The rollout follows a five-phase model: internal validation, pilot, A/B controlled expansion, full deployment, and continuous improvement. Each phase has explicit go/no-go gates to protect SDR experience and data quality throughout.

# Rollout Timeline

Eight weeks from first test to full-team adoption, with a continuous improvement track from month three onwards.

| | |
|---|---|
| **Phase 1: Pre-Launch Validation** | Week 1-2 |
| Phase 2: Pilot | Week 2-3 |
| Phase 3: A/B Shadow Rollout | Week 3-4 |
| Phase 4: Full Deployment | Week 4-5 |
| Phase 5: Continuous Improvement | Month 1+ |

Phase 1 · Week 1

# Pre-Launch Validation

Before rolling anything out to the team, we validate against real data. If the scoring logic doesn't hold up against historical conversion outcomes, we fix it here not in production.

### Historical Data Backfill

- Pull last 100 inbound leads from CRM (past 30 days)
- Run through enrichment pipeline and compare AI tier assignments to actual conversion outcomes

**Success metric:** ≥70% of Tier A leads converted to opportunity

### API Reliability Testing

- Stress test: 100 leads processed simultaneously

- Monitor API success rates across all data sources (target: ≥85% per source)
- Test failure handling: bad addresses, missing fields, partial data

**Success metric:** Zero pipeline crashes; graceful degradation on any API failure

### Output Quality Audit

- Manual review of 20 AI-generated outreach emails
- Each email must reference ≥2 specific enriched data points with actionable talking points

**Success metric:** ≥90% of emails rated send-ready (zero or light SDR edits needed)

**Deliverable:** System validation report accuracy, speed, and quality benchmarks documented

Phase 2 · Week 2-3

## Pilot with lead/high performers

Small enough to debug fast. Large enough to validate across different lead types. High performers give quality signal, not just complaints.

### SDR Selection

- 2 inbound specialists (web form leads) + 2 outbound specialists (conference / referral leads)
- Tests the system across different lead sources, data quality levels, and working styles

### Integration Setup

- New lead hits CRM → Zapier webhook fires → enrichment runs automatically
- Results populate custom CRM fields: Tier, Score, Email Draft, Key Signals
- Tier A Slack DM fires within minutes of lead arrival

### What We Measure — Daily for 2 Weeks

- Time saved per lead vs control group benchmark
- Email reply rate: AI-drafted vs manually written
- SDR satisfaction: daily 1–10 score
- Tier accuracy: did Tier A leads actually book meetings?

### Go Criteria

- Time savings ≥20 minutes per lead

- Reply rate maintained or improved vs manual
- SDR satisfaction ≥7/10
- Zero critical bugs

**Deliverable:** Pilot results deck with metrics, SDR testimonials, and refinement log

Phase 3 · Week 3-4

## Shadow A/B Rollout

A control group lets us prove the tool is driving results not just automation. It also de-risks scaling by surfacing infrastructure issues before 100% of the team is affected.

**Team Structure**

- Group A (Tool Users): 50% of SDRs, randomly assigned
- Group B (Control): 50% continue manual workflow
- Stratified by tenure, geography, and lead volume for balanced comparison

**Expanded Infrastructure**

- Scheduler runs every 30 minutes  new leads processed automatically
- Live dashboard for SDR Manager: tier distribution, API health, throughput
- Weekly digest: leads processed, Tier A count, avg time saved per lead

**Primary Comparison Metrics**

- Leads contacted within 24 hours (%)
- Email reply rate (%)
- Meetings booked per week
- Research vs conversations time split — tracked via CRM activity logs

**Go Criteria**

- Group A contacts ≥20% more leads vs Group B
- Group A reply rate ≥ Group B
- No bugs affecting more than 5% of processed leads

**Deliverable:** A/B results report: quantified business impact across time, quality, and pipeline

Phase 4 · Week 4-5

# Full Deployment

### Onboarding

- 45-minute live training session  recorded for async viewing
- "How to use AI SDR outputs" playbook linked from CRM
- Daily 15-minute office hours during the first week

### Production Infrastructure

- Migrate from Zapier webhook to native CRM integration (Salesforce / HubSpot)
- Scale backend: additional Railway dynos + Redis caching for API responses
- Monitoring: Datadog / Sentry for uptime and error tracking
- On-call rotation for first two weeks: GTM Engineer + 1 backend engineer

### Long-Term Success Metrics

- Adoption rate: >90% of SDRs actively using tool (≥5 leads / week)
- Coverage: >95% of inbound leads enriched within 1 hour
- Email acceptance: >80% used as-is or with light edits
- Business impact: increase in qualified meetings booked per SDR per week

**Deliverable:** Production launch checklist complete, full team trained, monitoring dashboards live

Phase 5 · Month 1+

# Continuous Improvement

### Adjacent Use Cases

- AE Handoff Briefs: auto-generated account research for closing reps
- CS Expansion Triggers: flag growth signals  funding, headcount, leadership changes
- Event Follow-Up: enrich trade show and conference leads in real time

### Data Feedback Loop

- Track which enriched signals correlate with deal close

- Retrain routing logic monthly remove APIs with low predictive value
- Feed closed-won data back into scoring model quarterly

**Governance**

- Monthly: GTM Engineer + SDR Manager + RevOps review
- Quarterly: Sales Leadership approves new features and roadmap
- Continuous: SDRs submit feature requests via Slack poll

# Decision Gates

Each gate is binary. Criteria not met means stop, fix, and re-evaluate. No gate-skipping.

### Gate 1: After Pilot (End of Week 3)

| GO | NO-GO |
|---|---|
| Time savings ≥20 min/lead | Critical bugs unresolved |
| SDR satisfaction ≥7/10 | SDR satisfaction <5/10 |
| Reply rate maintained or improved | Reply rate drops >10% |

### Gate 2: After A/B Test (End of Week 6)

| GO | NO-GO |
|---|---|
| Group A outperforms Group B on ≥2 metrics | No measurable improvement vs control |
| No scaling issues observed | API costs exceed approved budget |
| API costs within budget | Scaling issues unresolved |

# Risk Mitigation

| Risk | Impact | Mitigation |
|---|---|---|
| API rate limits during peak hours | **High** | Request queuing, backup API keys, 24-hour response caching |
| LLM generates inappropriate email | **High** | Human-in-loop for first 500 emails, automated compliance filter |
| SDRs don't trust AI scores | **Medium** | Show per-tier reasoning; allow SDR override with logging |

| Risk | Impact | Mitigation |
|---|---|---|
| CRM integration breaks | **High** | Fallback to Google Sheets, 24h SLA on fixes, monitoring alerts |
| High lead volume causes slowdown | **Medium** | Auto-scaling backend, async processing queue, load benchmarks |
| Data privacy / security concerns | **High** | SOC 2 review, encrypted API keys, audit logs, retention policy |

# Stakeholder Map

| Stakeholder | Role | Cadence | Key Concerns |
|---|---|---|---|
| **SDR Manager** | Primary owner | Weekly 1:1s | Team productivity, adoption rate |
| **RevOps Lead** | Data & systems | Bi-weekly sync | CRM integration, data quality |
| **IT / Security** | Compliance | As-needed | API security, data handling |
| **Sales Leadership** | Executive sponsor | Monthly review | ROI, pipeline impact |
| **Individual SDRs** | End users | Daily Slack + office hours | Ease of use, output quality |
| **GTM Engineer** | Builder & owner | Daily monitoring | Reliability, iteration velocity |

# Budget & Resources

## One-Time Costs

- API subscriptions: $0 (free tiers sufficient for MVP)
- Deployment infrastructure (Railway, Netlify): $0–$50/month
- Training materials: ~8 hours GTM Engineer time

## Ongoing Monthly Costs at Scale

- API usage (Census, WalkScore, FRED, NewsAPI): ~$100–$200/month
- LLM inference (Groq): $0 on free tier; $50–$100/month at full scale
- Backend hosting: $20–$50/month
- Monitoring tools: $0–$30/month

## Team Time Investment

- GTM Engineer: 40 hrs/week for month 1; 10 hrs/week ongoing
- SDR Manager: 5 hrs/week during rollout
- RevOps: 2 hrs/week for CRM integration support

## Conclusion:

SDRs should be having conversations, not doing research. This pipeline handles the research every lead, every time, in under 90 seconds.
